AI ENGINEER — FULL-STACK AI SYSTEMS

AI Engineer with hands-on experience building production-grade LLM-powered systems, agentic workflows, and full-stack AI platforms. Proficient in Python, FastAPI, LangChain, and React. Strong track record of designing autonomous AI agents with immutable audit trails, prompt injection defense, and governance-by-design — from architecture through deployment.

CORE TECHNICAL SKILLS

Languages & Frameworks: Python, SQL, JavaScript, React, FastAPI, LangChain, Node.js

AI & LLM: Claude API, OpenAI, Ollama, RAG (pgvector), agentscope, prompt engineering, agentic workflows, multi-agent orchestration

Infrastructure: Docker, Git, CI/CD, PostgreSQL, Redis, GCP, OPA/Rego

Practices: Full-stack development, API design, distributed systems, production AI deployment, governance-by-design

PROFESSIONAL EXPERIENCE

AI ENGINEER / FOUNDER — Fellow Governance (SaaS) 2025 – Present

- Architected a multi-agent orchestration system with 22 specialized LLM agents running deterministic workflows via LangChain
- Built full-stack AI Governance platform: Python/FastAPI backend, PostgreSQL+pgvector for RAG, Redis for state management, Next.js 14 frontend
- Implemented immutable audit chain with SHA-256 hashing and multi-tenant architecture with row-level security
- Deployed on Docker/GCP with automated CI/CD pipelines
- Engineered OPA/Rego policy-as-code engine that transforms regulatory requirements into executable policies in under 300 seconds

AUTONOMOUS AGENT DEVELOPER — Ezra Agent (Telegram Bot) 2025 – Present

- Built stateless-per-turn autonomous Telegram agent with persistent encrypted vault and sandboxed script execution
- Implemented OPA/Rego policy enforcement for real-time governance, PII redaction, and prompt injection blocking
- Designed circuit breaker pattern with automatic model fallback and token budget tracking
- Integrated Git-synced memory vault for persistent knowledge across sessions
- Deployed 24/7 via launchd with immutable audit logging

SENIOR PROJECT MANAGER — Turnkey Construction 2013 – 2024

- Led end-to-end delivery of R\$30M+ in corporate projects for premium B2B clients, from requirements gathering through final handover
- Coordinated cross-functional teams (architecture, engineering, IT, logistics) consistently delivering on time and within budget
- Built vendor management strategies that reduced delivery timelines by 20% without quality impact
- Developed client onboarding and implementation processes adopted as company-wide standard

KEY PROJECTS

Fellow Governance — AI Governance Platform Multi-agent LLM system with OPA/Rego policy-as-code, immutable audit trails, and RAG pipeline using pgvector. → github.com/FABIOEVERTON/Fellow_Governance

Ezra Agent — Autonomous Telegram Agent Production agent with prompt injection defense, circuit breaker, encrypted vault, and governance layer. → github.com/FABIOEVERTON/Ezra_Agent

EDUCATION

Law School (8 semesters) — UniProcessus Technology Degree in Notarial and Registry Services — UniProcessus

CERTIFICATIONS

Building with the Claude API — Anthropic (Mai/2026) Credential: txhnot8yv2ob AI Capabilities and Limitations — Anthropic (Mai/2026) Credential: oxmavxc8p2rv Google Cloud Fundamentals: Core Infrastructure — GCP Skills Boost (Mar/2026) Skills: GCP, VPC, Compute Engine, Cloud SQL CIPP/BR — IAPP (In Progress) AIGP — IAPP (In Progress) AWS AI Practitioner — Em estudo
